JESUS PUPO LAFAURIE

SOFTWARE ENGINEER

PROFESSIONAL SUMMARY

Bilingual Full Stack Developer and IT Support Specialist with strong experience resolving critical software, networking, and payment processing issues in international environments. Proven ability to diagnose communication failures through data structure analysis and manage legacy systems. Combines formal technical training with hands-on development of modern web applications using React, Node.js, and relational databases. Focused on clean code, AI-assisted workflows, and high-impact user experiences.

SKILLS

Frontend
JavaScript (ES6+), React, Vite, HTML5, CSS3, SCSS, Tailwind CSS, Bootstrap.

Backend & Databases
SQL (PostgreSQL), Supabase (Data Modeling), API Integration.

Tools & Workflows
Git, GitHub, Mapbox SDK, Salesforce, AI-driven workflows (DeepSeek / Gemini).

Systems & Networks
Legacy Systems Troubleshooting.

EXPERIENCE

IT TECHNICAL SUPPORT

Sept 2024 – Mar 2026

Movate (for Toast, Inc.)

- I provided support for operational equipment such as terminals, printers, and card machines installed in restaurants and hotels that had configuration issues with each other, primarily through HTTP requests on customer terminals, after first connecting remotely. I also corrected configuration errors in the equipment's logical layout, such as service areas and kitchen areas.
- I resolved subnet outages and network hardware configuration issues—with the TCP/IP protocol being the most common—as well as connectivity issues for B2B enterprise clients.
- Ranked Top 3 at the Barranquilla site, achieving an FCR under 1 hour and maintaining technical transfer rates below 10%.
- Delivered 100% bilingual technical support in English across remote and on-site environments.

IT TECHNICAL SUPPORT

Mar 2026 – Jun 2026

UNOPOS (PAYROCK)

- I handled POS software and hardware configuration issues using the native tool, which is also a legacy system (Manager Console).
- Troubleshot connectivity outages to find the failing node when the issue was not on the ISP side, checking modems, routers, patch panels, switches, cabling, terminals, mesh setups and scanning IPs.
- Diagnosed hardware faults such as printers, identifying whether they were local, IP or serial, and reviewing restaurant schematics, print routes and device configurations.
- Resolved terminal failures by isolating whether all or a single terminal was affected, verifying the server (usually Terminal 1), hard drives, card readers and configurations.
- I advised corporate clients on exporting financial reports and operational audits for the retail sector, configuring menus, updating prices, promotions, and other matters, while consistently maintaining high standards of customer service.

FEATURED DEVELOPMENT PROJECTS

LA MAGIA DE CANTAR

Vocal Coaching E-commerce Platform (Next.js, TypeScript, PostgreSQL, Supabase, Mercado Pago, Resend).

Designed and deployed a production e-commerce platform for TV vocal coach Yanetsis Alfonso to sell vocal training plans: plan catalog from a live database, secure Mercado Pago checkout, and automated order tracking.

Integrated payment webhooks with signature verification, server-side amount reconciliation, and duplicate-safe confirmation emails. Built an AI voice test that records visitors and returns a personalized assessment to convert them into students.

EDUCATION

TECHNICAL DEGREE IN SOFTWARE PROGRAMMING

In Progress (2026)

Servicio Nacional de Aprendizaje (SENA)

Core focus on programming logic, data structures, Entity-Relationship (ER) modeling, and relational database querying with SQL.
